Cable Airport welcomes new faces to our Cable community! LEADING EDGE AVIONICS!

FREE BURGERS AT AVIONICS SHOP GRAND OPENING

Leading Edge will host a Grand Opening event with FREE burgers, FREE sodas & beers, and FREE "TOP GUN: MAVERICK" showing outdoors on the big screen. Family and friends are welcome!

LEADING EDGE AVIONICS

GRAND OPENING

FEBRUARY 11 2023

Starting at 15:00

CABLE AIRPORT HANGAR

Coming soon, February 2023, a new hangar facility will bring a state-of-the-art avionics shop to Cable. Unlike the so-called full-service shops, Leading Edge Avionics specializes in avionics only. Fast, friendly, and affordable services will keep you and your aircraft in the air, and less time in the shop.

The time-honored company is expanding in Southern California. Offering major upgrades and overhaul services at their local SoCal hangars (SNA, LGB, CNO), the company also offers 24/7 mobile repairs, calibrations, and other AOG services from SAN to SBP and TRM.

Considering a glass cockpit? Leading Edge Avionics upgrades more "steam gauge" aircraft than anyone in the southland. The seasoned team of professional installers removes miles of unnecessary wires and hundreds of pounds of aging equipment every month with fresh and efficient products from Garmin, Avidyne, and others. Installation is as important as the equipment itself, and choosing the recognized leader is vital to your safety.

Problems with your legacy equipment? The company's accomplished bench-test technicians can inspect and repair most equipment without the long downtime of shipping parts to some factory in another part of the world. It's reassuring to have the ability to talk to the repairman who knows your equipment and helps you to know your equipment.

Best yet, as Southern Cal pilots, your airplane is probably flying near one of the many airports where Leading Edge Avionics can support "on the road" needs. If you're on the ground, away from Cable, it's an enormous comfort (and economically efficient) to have your maintenance tech show up with your aircraft's full history and wiring schematic.

Can't wait 'til February? Connect with Team Leading Edge Team today to learn more about their full line of products and services. www.LEAvionics.com or for more information, call (714) 955-6151.

EAA VMC Club Question of the Month

In most production, light general aviation aircraft, which instruments rely on a vacuum pump for operation?

(Keep reading for the answer below!)

Happy New Year from EAA Chapter 448! Help us keep the Spirit of Aviation alive by joining us at our chapter events right here at Cable Airport in the EAA Chapter 448 clubhouse on the north side of the airport. In addition to our in-person events, we provide an online option for those who cannot make it in person. Everyone interested in aviation is welcome at our events.

Contact us at contact@eaachapter448.org to subscribe to our mailing list and receive meeting links and further information for our events.

Our VMC Club coordinator, Doug Fieri, is hosting this month's **VMC Club** on **Wednesday, February 11th at 7 p.m.**

Join us the following day (**Thursday, January 12th**) online for **IMC Club**. Be sure to subscribe to our mailing list for links and further details.

EAA VMC Club Question of the Month – Answer

In most, the attitude indicator and directional gyro rely on the vacuum pump for operation. Failure of the vacuum pump is indicated by the vacuum suction indicator, and the affected instruments slowly spool down, showing "lazy" meandering indications before becoming completely inoperative.

Some aircraft will be equipped with electric-powered gyros for these indicators, and still others rely on a venturi system to provide suction for the vacuum gyros.

"Great day for a First Tower Solo in 5E5!
 Couldn't ask for a better view from the sky!"
